

Getting Started with App Engine

Lab Objectives

- Initialize App Engine
- Preview an App Engine application running locally in Cloud Shell.
- Deploy an App Engine application, so that others can reach it.
- Disable an App Engine application, when you no longer want it to be visible.

In this lab, we just deployed a simple hello world application into the App Engine. We first cloned the project and ran it into the Cloud Shell.

We initialized the app with the *gcloud app create* command. We then deployed it with the *gcloud app deploy* command.

apps deployed to App Engine can't be undeployed. Instead, we can just disable them in App Engine settings. After disabling our deployed app, make a request on its link shows an error like shown below:
