

Infrastructure Preview

Lab Objectives

- Use Marketplace to build a Jenkins Continuous Integration environment
- Verify that you can manage the service from the Jenkins UI
- Administer the service from the Virtual Machine host through SSH

Marketplace is a Google Cloud component that allows deploying software packages without any configurations or any knowledge of compute engine, cloud storage.... In this lab, we built a Jenkins Continuous Integration environment.

[Jenkins environment]

We then connected to it via SSH and we saw that we had full administrative control over Jenkins.
